

# IMPORTANT: (Read this before you edit anything)

This template is an advanced HTML5 template featuring seamless page loading technology powered by AJAX.

It also contains some modern features such as LESS that lets you easily manage style presets such as colors, fonts and some additional visual enhancements.

If you just test the template running from your local computer, you will may NOT be able to see proper layouts, colours or fonts, but this is NOT at all caused by any errors. This is because, **LESS and AJAX will work only from server side**, means you have to either upload all files to a real web hosting server, or a LocalHost system (for example MAMP for MacOS, XAMP for windows) in order to view proper layouts, colours and fonts rendering of this template.

Alternatively, you can use latest **Firefox web browser** which is capable of running AJAX and LESS from your local system (in this case you don't need any localhost server). We highly recommend you to use this browser for all development purpose of this template.

For detailed instructions, we have carefully prepared a PDF guide. For your convenience, it is included with the template pack. Please take your own time to read it. Thank you.

*Please Customize Responsibly. Happy site building :)*
